AWS, GCP, Jenkins, ArgoCD, Harness, Docker

ABOUT ME

Engineering Leader & Architect with 15+ years of experience, including 8+ years at PayPal driving technical excellence in high-scale fintech environments. Proven track record of leading high-impact teams while remaining deeply hands-on. Passionate about technical mentorship, code quality, and building reliable infrastructure for global operations.

WORK EXPERIENCE

PayPal

Engineering Manager

2024 - PRESENT

- Lead a cross-functional team of 6 employees, including Frontend, Backend and Support Engineers in PayPal's internal experimentation platform and an internal tool for PayPal's global sales team for prospecting possible new clients
- Collaborated with Product Managers and key stakeholders to refine requirements, prioritize the backlog, and align the engineering roadmap with company objectives
- Led the end-to-end UI/UX redesign of PayPal's experimentation platform, improving usability and visual consistency across the product
- Drive execution and technical excellence across roadmap initiatives
- Introduced AI capabilities to internal lead generation tools used by sales teams

Senior Staff Engineer

2021 - 2024

- Contributed to feature planning and documentation of the experimentation platform
- Led technical design docs and conducted thorough code reviews
- Architected and developed a cloud-native third-party data integration platform based on a microservices architecture, ensuring scalability, resilience, and efficient onboarding of new data providers
- Acted as the team DevOps lead, owning CI/CD pipelines and infrastructure
- Introduced streamlined dev lifecycle processes and sprint execution standards

Fullstack Engineer

2018 - 2021

- Built internal web tools for big data teams
- Created and maintained an internal React UI library
- Helped create and maintain the default PayPal template for React based applications

Neura

Frontend Engineer

2015 - 2017

- Lead frontend developer for all company-facing platforms
- Built data visualization dashboards and mentored interns

Everything.me

Frontend Engineer

2012 - 2015

- Developed internal tools, blogs, CMS, and test automation frameworks
- Created the open-source Android test automation tool Magneto
- Led development of Firefox OS Notes app with Evernote API integration
